Does platinum tarnish?

Other Precious Metals · https://www.purejewels.com/faqs/other-precious-metals/does-platinum-tarnish/

Platinum is a popular choice for fine jewellery due to its durability, rarity, and beautiful luster. However, many people wonder if platinum tarnishes over time like other metals. The short answer is no, platinum does not tarnish.

Unlike silver, which can tarnish when exposed to air and moisture, platinum is a naturally white metal that maintains its shine and brilliance without the need for regular polishing. This makes it an ideal choice for everyday wear, as it will not lose its beauty over time.

Platinum is often used in engagement rings and wedding bands because of its strength and longevity. It is also hypoallergenic, making it a great option for those with sensitive skin. Platinum is a popular choice for setting diamonds and other precious gemstones, as its neutral colour enhances the brilliance of the stones.

When buying jewellery, it is important to consider the metal used in the piece. Platinum is a valuable metal that will not lose its shine or colour over time, making it a worthwhile investment for those looking for high-quality jewellery that will last a lifetime.

In conclusion, if you are looking for a metal that will not tarnish and will maintain its beauty for years to come, platinum is an excellent choice. Its durability, rarity, and hypoallergenic properties make it a popular option for those looking for fine jewellery that will stand the test of time. Whether you are buying an engagement ring, wedding band, or a special piece of jewellery for yourself, platinum is a luxurious choice that will never go out of style.
